DETAILED ACTION

1. Claims 1-13 are presented for examination.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. As per claim 1, line 6 recites the limitation "**predetermined data**". It is not clear to the examiner what predetermined data is related to, or is it some data established ahead of time, the term predetermined data is vague and indefinite; therefore, it makes the claim language ambiguous.
5. As per claims 2-13, they are also rejected for incorporating the deficiencies of their base claim.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-2 and 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshioka et al (US Pat. No. 6,075,899).

8. As per claims 1-2, Yoshioka et al disclosed the invention as claimed, including a memory access control apparatus comprising: a memory access control unit for storing image data in a memory by a two-dimensional array according to values of a bank, a row, and a column inside the memory (two dimensional array; x axis, y axis; col. 2, lines 61-64; col. 7, lines 44-52) where the image data is to be stored calculated on the basis of coordinate values of the image data constituting one image frame and predetermined data (col. 22, lines 66-67; col. 23, lines 1-14).

9. As per claims 11-13, Yoshioka et al disclosed that the memory access control unit stores image data of a horizontal direction inside said one image frame in the N^{th} row inside the memory in a horizontal direction, and stores image data of a vertical direction inside said one image frame in the N^{th} row direction inside the memory in a vertical direction (col. 40. lines 18-32); and stores image data of 256 words in the Nth bank of the Nth row inside the memory, and a word per bank can be 32 and a unit line can be 8 (col. 2, lines 37-39; col. 13, lines 17-40).

Allowable Subject Matter

10. Claim 3-10 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

1. The prior art of record fail to teach or suggest individually or in combination a memory access control apparatus, wherein the apparatus further comprising the following limitations: "wherein the predetermined data is a word bank, a row per unit line, an offset, and a base row value" (as per claim 3). The above limitations of the present claims invention have not found to be anticipated, suggested or made obvious by the prior art of record, either singularly or in combination.
